DETAILED ACTION

Summary

Receipt of Applicants Remarks and Amended Claims filed on March 1, 2007 is acknowledged. Applicant has canceled claims 1-13, 15-16. Claims 14 and 17 are pending in this application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

Art Unit: 1615

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamaguchi et al. (US Patent 5,972,357).

Yamaguchi teaches health foods and cosmetics containing polyisoprenylated benzophenone derivatives." The derivatives may be prepared by any method such as the chemical synthetic method or the extraction of the polyisoprenylated benzophenone derivatives from the plant containing them. The preferred derivatives includes, for example, well known substances such as Garcinol also known as Camboginol, isogarcinol also known as Cambogin, xanthochymol, and guttiferone" (column 3, lines14-24). Yamaguchi further teaches, "the plants containing the polyisoprenylated benzophenone derivatives described are some kind of tropical plants belonging to the Guttiferae family, for example Garcinia cambogia, Garcinia indica, and Garcinia purpurea" (column 3, lines 28-33).

Yamaguchi's example 1 is drawn to a healthy drink with extracts. The example teaches "In the same manner as in Referential Example 1, the hydroxycitric acid extracted residue of the dry rind of the Garcinia indica was extracted with ethanol to give an extract containing 25% w/w of garcinol and 5% w/w of isogarcinol" (column 12, lines 56-61). The Referential Example 1 can be found in Column 6, lines 4-44.

Yamaguchi also teaches "the derivatives are effective ingredients and have a variety of functions for maintaining health such as anti-ulcer activity, the Maillard

Art Unit: 1615

reaction inhibiting activity, anti-oxidation activity, reactive oxygen species scavenging activity and anti-tumor promotion activity" (abstract). The derivatives are also expected to have "prophylactic effects on various geriatric diseases, stress diseases, diabetic diseases, tumorigenisis and the aging of skin, such as hardening, wrinkling, and pigmentation" (column 2, lines 45-55).

Yamaguchi does not disclose a compositon comprising 3% Garcinol and 2% Cambogin.

Applicant is reminded that where the general conditions of the claims are met, burden is shitted to applicant to provide a patentable distinction. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. See In re Aller, 220 F.2d 454 105 USPQ 233,235 (CCPA 1955).

Furthermore the claims differ from the reference by reciting various concentrations of the active ingredient(s). However, the preparation of various cosmetic compositions having various amounts of the active is within the level of skill of one having ordinary skill in the art at the time of the invention. It has also been held that the mere selection of proportions and ranges is not patentable absent a showing of criticality. See In re Russell, 439 F.2d 1228 169 USPQ 426(CCPA 1971).

Claims 14 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Majeed et al (PCT Publication WO 2002/14477, now US Patent 7,063,861).

Majeed teaches a composition comprising bydroxycitric acid (HCA) in combination with either one or both of Garcinol and antrocyanin. Garcinol is described

Art Unit: 1615

as having well know anti-oxidant effects, an aid to weight loss, chemopreventive properties, inhibition of cytoplasmic citrate lysase. Majeed additionally teaches a method for extracting Garcinol by "extracting Garcinia spent fruit from suspension with toluene and 5% methanol to obtain a paste having 20% PPB's (Garcinol-15%; Cambogin 5%" (column 6, lines 14-19). In additional steps outlines, Majeed further teaches the purification of the Cambogin and Garcinol to increase the percentage of each present in the composition.

Majeed does not disclose a composition comprising 3% Garcinol and 2% Cambogin.

Applicant is reminded that where the general conditions of the claims are met, burden is shitted to applicant to provide a patentable distinction. Where the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation. See In re Aller, 220 F.2d 454 105 USPQ 233,235 (CCPA 1955).

Furthermore the claims differ from the reference by reciting various concentrations of the active ingredient(s). However, the preparation of various cosmetic compositions having various amounts of the active is within the level of skill of one having ordinary skill in the art at the time of the invention. It has also been held that the mere selection of proportions and ranges is not patentable absent a showing of criticality. See In re Russell, 439 F.2d 1228 169 USPQ 426(CCPA 1971).

Response to Arguments

Applicant should submit an argument under the heading "Remarks" pointing out disagreements with the examiner's contentions. Applicant must also discuss the references applied against the claims, explaining how the claims avoid the references or distinguish from them.

Conclusion

No Claims are allowable. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melissa S. Mercier whose telephone number is (571) 272-9039. The examiner can normally be reached on 7:30am-4pm Mon through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Woodward can be reached on (571) 272-8373. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
